Al region, comprising a site-specific mutation in the region bounded by the codons for Metl and Arg192 or Ser194, esp. one or more of Arg7, Arg11, Asp9, His44, His70 and Glull2 (see tag h-m of Features Table). The analogue may also comprise a truncation of the C-terminal portion starting at Trp179 (see tag n of Features Table). The DNA may also encode subunit B of CT, esp. the B oligomer in the C-terminal portion starting at Trp179 (see tag n of Features Table).

XX Introducing and expression and specific expression and specific codding the gene in animal cell comprise collipses containing a collipse collipse containing a collipse collips
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq_name:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       a gene in animal cells, comprising infecting animal cells with bacte blebs containing a eukaryotic expression cassette encoding the gene. The present invention also describes: (1) a bacterial bleb containing
                                                                        bacterial bleb containing a eukaryotic expression cassette including the polynucleotide coding sequence. The method can be used for introducing endogenous or foreign genes into animal cells using bacterial blebs as vectors. The method allows for the delivery of eukaryotic expression cassettes encoding the endogenous or foreign genes into animal cells or tissues, and is useful for expressing e.g. vaccine antigens, gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Introducing and expressing a gene in animal cells, useful for delivering a therapeutic agent to the cells, comprises infecting animal cells with bacterial blebs containing a eukaryotic expression cassette encoding the gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cholera toxin Al subunit sequence SEQ ID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       705

The method can be used in gene therapy. The present sequence represents the cholera toxin Al subunit sequence, which is used in an example from the present invention for the production of non-pyrogenic blebs containing a DNA vaccine.

CC The method is useful for detecting toxigenic V. cholerae organisms or CC toxigenic V. cholerae nucleic acid, e.g., ctxA gene, in an environmental CC water sample e.g., tap water sample, river water sample, lake water CC sample or a sewage sample. The method is useful in PCR assays for CC detecting a microorganism or nucleic acid of the microorganism in a CC v. cholerae nucleic acid in a sample. The PCR method involving (I) is CC v. cholerae in water samples. The present sequence represents a creasent invention leaves of the v. cholerae ctxA gene, which is used in an example from the V. cholerae ctxA gene, which is used in an example from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC The present invention describes a method for amplifying (A1) toxigenic CC vibrio cholerae nucleic acid by: (a) performing a polymerase chain CC reaction (PCR), by combining a medium containing toxigenic V. cholerae CC nucleic acid with an oligonucleotide primer (I) which will bind to a section of V. cholerae nucleic acid, in an environment suitable for CC carrying out PCR; (b) combining the medium with a second primer which CC will bind downstream to the first primer to a section of the CC corresponding sections of the V. cholerae nucleic acid; and (c) amplifying CC corresponding sections of V. cholerae nucleic acid present in the medium. CC corresponding sections of V. cholerae nucleic acid present in the medium. CC corresponding sections of v. cholerae nucleic acid present in the medium. CC corresponding sections of v. cholerae nucleic acid v. cholerae organisms or CC corresponding sections of v. cholerae nucleic acid. e.g., ctxA gene, in an environmental cc water sample e.g., tap water sample, river water sample, lake water cample or a sewage sample. The method is useful in PCR assays for CC sample or a sewage sample. The method is useful for detecting toxigenic CC v. cholerae nucleic acid in a sample. The PCR method involving (I) is CC v. cholerae in water samples. The PCR method involving (I) is crapid, economical, specific and sensitive for detecting toxigenic CC v. cholerae in water samples. The present sequence represents a CC region from the V. cholerae ctxA gene, which is used in an example from the V. cholerae ctxA gene, which is used in an example from

A sequence and all of the subunit. B sequence of Shigella flexneri. The DNA fragment is useful as a probe for specific detection of toxigenic enterobacteria.

It codes for a claimed 749-amino acid fusion protein (see AAW80599). The invention relates to: chimeric proteins comprising antigenic proteins of H. pylori and A2 and B subunits of V. cholerae toxin; recombinant DNAs encoding such chimeric proteins; recombinant expression vectors; a process for preparing the chimeric proteins using transformed microbial host cells; and to preventative and therapeutic vaccines

The chimeric proteins are designed to have excellent immunogenicity, to be stable in the stomach, to penetrate the mucous membrane of the intestine, and to stimulate production of sIgA. They can additionally be used as active ingredients in diagnostic kits for H. pylori infection, and for production of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               xhoI; This library, constructed by John Davies and Jeffrey McDermott, combines cDNAs from CC-1690 cells grown to mid-log phase in TAP (acetate-containing) medium in the light. TAP medium in the dark, HS (minimal) medium in ambient levels of CO2 and HS medium bubbled with 5% CO2. PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda ZAP II (Stratagene) in the ECORI (5') and XhOI (3') sites. pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              chauser@duke.edu

This GSS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces kluyveri, Kluyveromyces marxianus var. marxianus, Pichia acquista, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CNS06VRH 954 bp DNA linear GSS 06-JUL-20 T7 end of clone AX0AA024E08 of library AX0AA from strain CBS 7064 pichia farinosa, genomic survey sequence.

Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for

In the TJ Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one eDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Choi, Close). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of pired value 20 or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       83.50
